

System Recovery Console

Recover Field Failed Devices

Unlike any software on the market today, Now Micro's Embedded Computing Devices with SRC provide a simple interface for performing field backups and restores. With a reboot and few simple clicks get systems back up and running fast. Drastically reducing the need for field replacements and on-site technician visits saving you time and money.

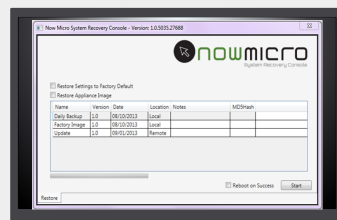

Product Features

- Backup and restore the operating system locally while the system is running
- Support remotely performed actions
- Reduce Support Cost
- Improve enduser customer support experience
- Close more tickets faster
